Managed access is not just technology — it is a vital security component for controlling and reporting facility traffic.

Managed access gives you full control over the movement of workers, customers, and other visitors in your facility. Alarm Detection Systems provides access solutions that are controlled at all times from our award-winning, UL listed Central Station. Hardware can be installed and monitored at a single entrance, or numerous readers can span multiple locations.   By choosing a complete turn-key solution managed by Alarm Detection Systems, you will eliminate the need for costly support personnel and software.

Alarm Detection Systems provides:

- 24/7 Access Management
- Remote System Administration
- Alarm Processing
- Detailed Reports

Access control that incorporates:

- Keypads
- Proximity Card Readers
- Smart Card Technologies
- Biometric Readers
- Portrait Badging
- Electromagnetic Locks
- Electric Strikes

A proximity card system does not require contact with the reading device of an access control system. Cards only need to pass relatively close to the reader in order to allow access. Installation of this equipment is unobtrusive at your location and easy to update. Contact Alarm Detection Systems to learn about the latest managed access solutions available today.
