

Utilizing CCTV in a security system is highly effective for crime prevention, detection — and verification.

An event that endangers employees, students, patrons, or property of any commercial establishment can happen at any time. Locations that are open to the public have a fundamental need to observe access to the premises. Closed Circuit Television (CCTV) is the industry standard in surveillance security cameras. Cameras placed in the right areas will monitor activity as it takes place. In the event of an incident, actions of the participants are recorded, security personnel can act in real time, and video footage may be used later for evidence gathering.

Alarm Detection Systems offers advanced CCTV technology, including:

- Analog Cameras
- Network Cameras
- Digital Video Recorders (DVRs)
- Network Video Recorders (NVRs)
- Hybrid Video Recorders (HVRs)
- Hosted Video Storage (Internet)

Cameras that incorporate:

- Night Vision
- Infrared Night Vision
- Thermal Imaging
- Video Analytics
- Video Verification
- Resistance to Vandalism
