# Video Verification Reduces False Alarms, Losses, & Errors
— Enables Priority Response from Authorities

Every time an alarm is triggered, there is the possibility that a potential crime is in progress. Combining video with incident notification helps provide a clearer picture of the security event. Our operators can detect and verify if there is human activity on site and share this information with first responders. As a result, response resources are prioritized and costly false alarm fees are greatly reduced.

Traditional Alarm Reporting

1. Event Occurs	2. Alarm Activates	3. Central Station Receives Data	4. Report Sent to Authorities

Alarm Activation

Priority Dispatch

1. Event Occurs	2. Alarm Activates	3. Central Station Receives Data	4. Report Sent to Authorities

Video Capture

Alarm Activation

Certified Crime in Progress

Compatible with existing security systems, Video Verification can be deployed in multiple configurations. Basic equipment sends a short, ten second video clip when an alarm is triggered. While intermediate solutions provide longer, searchable video feeds (by zone) with a Digital Video Recorder (DVR).
